Below is the "Deep Research" map of the sources and documents that provided the facts, quotes, and narrative structure used to write that biography.

---

1. The Narrative Source: Prusiner's Memoir

The emotional core of the text (the "pariah" and "heretic" labels) comes directly from Prusiner's own retelling of his life.

- **Source:** *Madness and Memory: The Discovery of Prions—A New Biological Principle of Disease* by Stanley B. Prusiner (Yale University Press, 2014).
- **Connection:** This book is the primary source for the "scientific pariah" narrative. In it, Prusiner details the "vituperative" attacks from colleagues and the "savage" nature of the scientific press in the 1980s.

2. The Technical Foundation: The 1982 "Prion" Paper

The text mentions the year **1982** and the definition of a prion. This is the exact year Prusiner published his landmark study.

- **Source:** Prusiner, S. B. (1982). "Novel proteinaceous infectious particles cause scrapie." *Science*, 216(4542), 136–144.
- **Connection:** This paper coined the term **"prion"** (pro-in) and proposed the "protein-only" hypothesis that violated the Central Dogma of molecular biology.

3. The "Radiation" Evidence

The text notes that the pathogen "resisted radiation doses that should have shattered any genome." This refers to experimental data that predated Prusiner but which he used to build his case.

- **Sources:** * Alper, T., et al. (1966). "The Exceptionally Small Size of the Scrapie Agent." *Biochemical and Biophysical Research Communications*.
    - Griffith, J.S. (1967). "Self-replication and scrapie." *Nature*.
- **Connection:** These researchers first noted that the scrapie agent was resistant to UV and ionizing radiation (which destroys DNA/RNA). The AI text uses this specific historical evidence to explain why the "rules" were being broken.

4. The Nobel Prize & Validation

The text mentions the **1997 Nobel Prize** as "vindication."

- **Source:** The Nobel Assembly at Karolinska Institutet, Press Release: "The Nobel Prize in Physiology or Medicine 1997."
- **Connection:** The AI's phrasing regarding "fifteen years of ridicule" mirrors the Nobel Committee's own acknowledgment that Prusiner's work was initially met with great skepticism before being proven correct.

5. The "Heretical" Quotes and Interviews

The phrase **"The idea was heretical"** is a direct or paraphrased quote often found in Prusiner's public interviews.

- **Source:** *Academy of Achievement* Interview with Stanley Prusiner (1998/2004).
- **Connection:** In this widely cited interview, Prusiner uses the terms "heresy" and "orthodoxy" to describe his struggle against the scientific establishment.

6. Extension to Alzheimer's and Parkinson's

The concluding thought—that prions are a template for other diseases—is the "modern" consensus that appears in recent medical textbooks.

- **Source:** Goedert, M. (2015). "Alzheimer's and Parkinson's diseases: The prion concept in relation to assembled Aβ, tau, and α-synuclein." *Science*.
- **Connection:** This confirms the AI was trained on data from at least 2015 onwards, linking Prusiner's 1980s work to modern neurodegenerative research.
